

PRESS RELEASE

Introducing the Indoor Air Quality Society: A forum for Industry, Academia, Government and Consumers on Indoor Air Quality (IAQ) issues.

April 1st, 2022

IAQS is a not-for-profit Society, which aims to use the knowledge and momentum generated by its network to raise awareness of the wide range of human health issues directly related to compromised indoor air.

We aim to bring industry experts, researchers regulators government officials and consumers together to stimulate debate in order to educate the public at large on IAQ, as well as to address the many misperceptions in this area.

IAQS was officially registered on February 1st, 2022, as an NGO. This network for Indoor Air Quality seeks to translate the latest scientific discoveries into best practice.

IAQS aims to develop an international network to influence and educate the debate on tackling the problems caused by indoor air quality. Composed by international experts, individuals, and organizations, who have a stake or interest in indoor air quality.

Prof Daniel Bonn, Chair of IAQS said, “We believe that the time is absolutely right to launch this initiative. It is doubtful, if there has ever

been more public debate about the role of air in transmitting respiratory infections and the deleterious effects of compromised indoor air on human health in general.”

Official Launch during Interclean Amsterdam

From 10-13 May 2022, IAQS will celebrate its Official Launch during Interclean at Rai Amsterdam. The IAQS team will be present in the Healthcare Hall on stand 12.419. The team will love to tell you more about the society, planned events, opportunities for membership and partnership.

“Curating the Air” is IAQS’s slogan as well as the title of its first International Symposium that will be held on May 11th. In this symposium 3 prominent scientists/experts from different fields will explain why it is important to “curate” the air inside buildings and will highlight the health benefits for the occupants of those buildings. A networking cocktail will be organized directly after the Symposium to connect experts and participants.

It is all up in the Air is an interactive AIR debate organized by InterClean and endorsed by IAQS.

Both experts and members of industry will challenge and educate the audience, through demonstrations and visualization with a focus on the importance of IAQ.

A debate not to be missed !!

For all the above events you can register [here](#).

About NOVAREUS

Novaerus, a WellAirBrand, has been providing medical-grade solutions that address a global problem, unhealthy indoor air. Indoor air is the culprit for many virus-based illnesses, asthma, allergies and a host of long-term health issues. WellAir’s Novaerusair disinfection devices help protect indoor environments in more than 60 countries worldwide. www.novaerus.com

About Livinguard

Livinguard is a Biotechnology and hygiene company. We are a microbiology and material science company that develops technology with self-disinfecting properties (you can refer to our face mask and recent air products in our web page). www.livinguard.com

About Viridiar

Viridi Air plants air purifying trees in unique filter strips (no forest areas): a green, sustainable filtering technique of the outdoor air. The objective is the absorption of, fine particles, NOx, ammonia, CO2 and ozone from the outside air. The trees are also beneficial to biodiversity! www.viridiar.com

About 3DS

Dassault Systemes’ Computational Fluid Dynamics (CFD) simulations allow our customers to engineer products ensuring accurate real world performance predictions with fast turnaround speeds. Through Digital Twins, SIMULIA’s Fluids technologies are used today for visualizing indoor air flows, inform design decisions, and assess Indoor Air Quality. <https://www.3ds.com/products-services/simulia/disciplines/>
